Introduction

This manual was prepared to provide Army personnel who handle solid, nitrocellulose based propellants a means of recognizing and identifying specific types of propellant that are in storage at Army installations. This manual contains only propellant for conventional ammunition propellant that is nitrocellulose based; rocket and missile propellant (except nitrocellulose based rocket propellant such as M7, AHH, M28) are not included in this manual. Both Army and selected Navy propellant are included; the Navy propellant is only that which is commonly in storage at Army installations and is not inclusive of all propellant that the Navy uses or produces.

This manual is not intended as a substitution for chemical analysis for the identification of unknown propellant material but to assist in focusing chemical analyses more precisely by using unique physical characteristics to determine possible candidates.

Each propellant, to include all models in its series, is presented in its own section. For example, all models of M30 (M30A1, M30A2, M30E1) are in the M30 section. Each section contains:

Formulation: The propellant formulation was obtained from Propellant Description Sheets (PDS), Military Specifications, and the MIDAS Database. The manual provides the typical formulation for each propellant model. Each ingredient is listed as the percentage of that ingredient in the formulation. Where ingredients were added after the propellant was mixed, that is clearly noted. These formulations may vary slightly from lot to lot but on the average are within the percentages listed. In some cases, the propellant formulation had changed, specifically to eliminate heavy metals or other non-environmentally friendly materials without a change to the model. Where this has occurred, designations such as Composition 1, 2, etc. have been added for purposes of clarity. The assignment of a Composition number is unique to this manual and is not an official designation. To determine the specific composition used, refer to the PDS for that specific lot. Where a propellant model may be known by more than one designation (e.g. M38 and WC 819) the propellant is listed with the most common designation used with a reference to the other model name.

Shape: The shape(s) of the propellant is identified. Often a propellant model may have a number of shapes such as flake, single perforated cylinder, multi-perforated rod, etc.

Color: The typical color of the propellant model is identified to include normal color changes that occur over time. For graphite coated materials, the interior color is identified.

Dimensions: The size and form of a propellant is based on the weapon system that it is used in. Dimensions of a propellant are provided by usage/caliber and were obtained from PDS's. Dimensions may vary slightly from lot to lot but are within the dimensions listed.

Photographs: Photographs are provided of every type, size and color of propellant that could be obtained. Care was taken to depict the propellant as exact size unless otherwise noted. For extremely small propellant grains, the actual size as well as a close-up to show detail is provided. For graphite coated materials, photographs of the interior of a split grain are provided. Where there are notable color changes that occur due to age of the propellant, photographs are provided of the typical color changes.

Appendix A contains information on the models of Navy propellant and how to decipher Navy lot numbers. This was included as the Navy nomenclature and lot number system differs dramatically from that of the Army.

Appendix B contains a cross reference of ammunition items to the propellant(s) in that item sorted by National Stock Number (NSN). An ammunition item may contain more than one propellant type (e.g. main charge, ignition cartridge, expelling charge) and while this section will provide all propellant types loaded into an item, it does not identify the quantity of propellant or what the propellant is specifically used for in that item. For these details, refer to the MIDAS database which can provide a breakout.

Appendix C contains a cross reference of ammunition items to the propellants in that item sorted by DODIC.

M1

FORMULATION :

There are three M1 formulations. Refer to the Propellant Description Sheet to determine exactly which formulation was used for a specific lot.

Composition 1:

Nitrocellulose	85.00 +/- 2.00
Dinitrotoluene	10.00 +/- 2.00
Dibutyl Phthalate	5.00 +/- 1.00
Diphenylamine	1.00 +/- 0.10 added
Lead carbonate	1.00 +/- 0.30 added

Composition 2:

Nitrocellulose	85.00 +/- 2.00
Dinitrotoluene	10.00 +/- 2.00
Dibutyl Phthalate	5.00 +/- 1.00
Diphenylamine	1.00 +/- 0.10 added
Residual Solvent:	0.9 max
Moisture:	0.6 +/- 0.2

Composition 3:

Nitrocellulose	85.00 +/- 2.00
Dinitrotoluene	10.00 +/- 2.00
Dibutyl Phthalate	5.00 +/- 1.00
Diphenylamine	1.00 +/- 0.10 added
Potassium sulfate	1.00 +/- 0.30 added

S H A P E

Single or multi-perforated cylinder.

C O L O R

Exterior: This propellant changes color as it ages and can vary from yellow, light green, medium green, dark green, to black green.

Interior: Same as exterior

M1 Single Perforated Propellant for Various Weapon Systems:

Note: Photos show the color changes that typically occur in M1 propellant as it ages. Upper left shows a newly manufactured M1 propellant; the propellant dulls and darkens with age. The lower right, an M1 propellant in excess of 30 years old. Color is an indication of age, not stability. Only a chemical analysis can determine the stability of any propellant.

M1 Multi-Perforated Propellant for 105mm (M67 propelling charge):

M1 Multi-Perforated Propellant for 155mm:

Note: Photos show the color changes that typically occur in M1 propellant as it ages. Far left, newly manufactured M1 propellant. Far right shows M1 in excess of 25 years old. This change occurs regardless of grain size and can be seen in M1 propellant for any weapon system. Color is an indication of age, not stability. Only a chemical analysis can determine the stability of any propellant.

M1 Multi-Perforated Propellant for 90mm:

M1 Multi-Perforated Propellant for 105mm (except M67):

M1 Multi-perforated for 8 Inch:

M2

FORMULATION :

Nitrocellulose	77.45 +/- 2.00
Nitroglycerin	19.50 +/- 1.00
Barium Nitrate	1.40 +/- 0.20
Potassium Nitrate	0.75 +/- 0.25
Ethyl Centralite	0.60 +/- 0.15
Graphite	0.30 +/- 0.10

SHAPE

Single or multi-perforated cylinder.

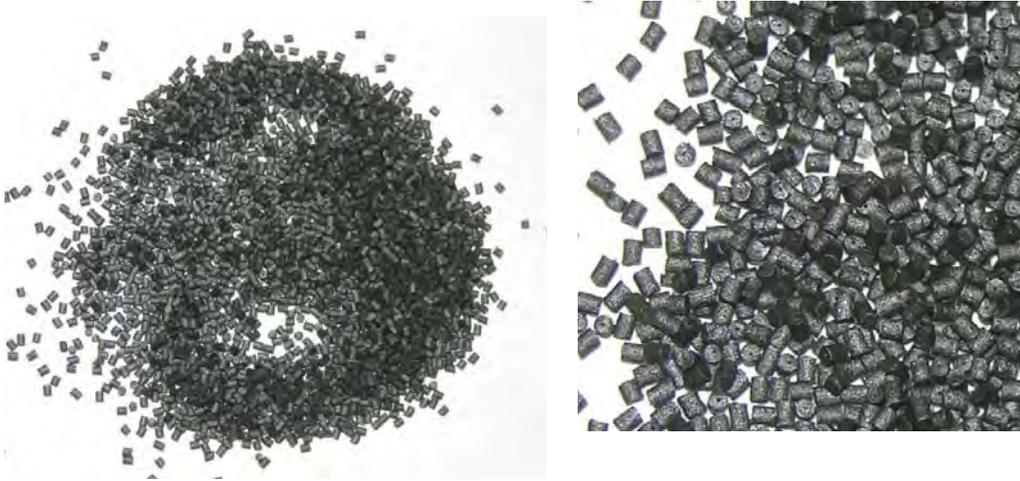

COLOR

Exterior: Dark gray, shiny or matte depending on type of graphite coating.
Interior: Single perforated: gray. Multi-perforated: gray, cream

M6 Propellant for 40mm:

M6 Propellant for 75mm:

M6 Propellant for 76MM:

M6 Propellant for 90MM:

M6 Propellant for 155MM:

Photo depicts typical color changes noted with M6 propellant over time (newest to oldest, left to right). Top of grain is shown on far right. Color is an indication of age, not stability. Only a chemical analysis can determine the stability of any propellant.

M6 Propellant for 155mm (M119A2)

Photo depicts the bright blue color change that commonly occurs in the M6 propellant in the M119A2 propelling charges stored in Southwest Asia. This phenomenon has only been seen in M6 propellant in M119A2 propelling charge "Y" lots. This appears to be a surface phenomenon as when the grain is split (right) the normal green color of the propellant is present. The color change has no correlation to diminished stability.

M6+2 Propellant for 76MM:

M6+2 Propellant for 5"/54:

M7

FORMULATION :

There are two M7 formulations. Refer to Appendix B or C to determine which formulation is used in a specific ammunition item.

Type I:

Nitrocellulose 54.60
Nitroglycerin 35.50
Potassium Perchlorate 8.05 max.
Carbon black 1.20
Ethyl Centralite 0.80 min.

Type II:

Nitrocellulose 58.70 +/- 1.50
Nitroglycerin 32.00 +/- 1.00
Potassium Perchlorate 8.05 max.
Carbon black 0.60 min.
Ethyl Centralite 0.80 min.

SHAPE

Single perforated stick

COLOR

Exterior and Interior: Black

DIMENSIONS

Usage	Length (in)	Dia. (in)	Perf Dia. (in)	Avg. Web (in)
TOW, M114	13.73	0.778	0.362	0.208
Rocket Motor, M180	7.38	0.576	0.244	0.166

M7 Propellant Stick:

While photo does show this propellant actual size, it does not show entire stick length which can vary from 7 – 14 inches.

Top view of M7 sticks depicting large single perforation

M8

FORMULATION :

Nitrocellulose	52.15 +/- 1.50
Nitroglycerin	43.00 +/- 1.50
Potassium Nitrate	1.25 +/- 0.25
Diethyl phthalate	3.00 +/- 0.50
Ethyl Centralite	0.60 +/- 0.15

SHAPE

Increment Sheet

COLOR

Yellow to orange. Black in a limited number of 4.2 inch increments.

DIMENSIONS

Usage	Length (Inches)	Width (Inches)	Perforations	Perf Size (Inches)	Sheet Thickness
60MM	1	1	2 (top and bottom)	0.25	0.004

M30

FORMULATION :

There are four formulations in the M30 series. Refer to Appendix B or C to determine which formulation is used in a specific ammunition item.

M30:

Nitrocellulose	28.00 +/- 1.30
Nitroglycerin	22.5 +/- 1.00
Nitroguanidine	47.70 +/- 1.00
Ethyl Centralite	1.50 +/- 0.10
Cryolite	0.30 +/- 0.10

M30A1:

Nitrocellulose	28.00 +/- 1.30
Nitroglycerin	22.5 +/- 1.00
Nitroguanidine	47.00 +/- 1.00
Ethyl Centralite	1.50 +/- 0.10
Potassium sulfate	1.00 +/- 0.30
Graphite glaze	0.15 added

M30A2:

Nitrocellulose	27.00 +/- 1.30
Nitroglycerin	22.5 +/- 1.00
Nitroguanidine	46.25 +/- 1.00
Ethyl Centralite	1.50 +/- 0.10
Potassium nitrate	2.75 +/- 0.25
Graphite glaze	0.15 max.

FORMULATION (CONT'D)

M30E1:

Nitrocellulose	40.5
Nitroglycerin	32.7 nom.
Nitroguanidine	25.0 nom.
Ethyl Centralite	1.50 nom.
Cryolite	0.30 nom.

SHAPE

7 perforated cylinder; 19 perforated hexagonal

M31

FORMULATION:

There are three formulations in the M31 series. Refer to Appendix B or C to determine which formulation is used in a specific ammunition item.

M31:

Nitrocellulose	20.00 +/- 1.30
Nitroglycerin	19.00 +/- 1.00
Nitroguanidine	54.70 +/- 1.00
Dibutyl phthalate	1.50 +/- 0.10
2-nitrodiphenylamine	1.50 +/-
Cryolite	0.30 +/- 0.10

M31A1:

Nitrocellulose	20.00 +/- 1.30
Nitroglycerin	19.00 +/- 1.00
Nitroguanidine	54.00 +/- 1.00
Dibutyl phthalate	4.50 +/- 0.30
2-nitrodiphenylamine	1.50 +/- 0.30
Potassium sulfate	0.30 +/- 0.10

M31A1E1:

Nitrocellulose	21.50 +/- 1.30
Nitroglycerin	18.00 +/- 1.00
Nitroguanidine	54.70 +/- 1.00
Dibutyl phthalate	3.00 +/- 0.30
Ethyl Centralite	1.50 +/- 0.30
Potassium sulfate	1.25 +/- 0.25
Carbon black	0.05 +/- 0.05

S H A P E

Single or multi-perforated cylinder; single perforated stick

C O L O R

Exterior: M31, M31A1, and M31A1E1 multi-perforated cylinder: Dark gray (graphite coated); M31 single perforated cylinder: brownish gray, graphite coated. M31A1E1 Stick: Light gray

Interior: M31: orange; M31A1 orange; M31A1E1 grain: Gray; M31A1E1 Stick: same as exterior.

Note: The 2NDPA stabilizer in the M31 and M31A1 models will stain contact material yellow within several minutes. This is a normal occurrence and does not effect the overall stability of the propellant or the safe handling of the propellant.

M38

Note: M38 Propellant is also known as WC819 Propellant.

FORMULATION :

Nitrocellulose	remainder
Nitroglycerin	2.0 max.
Dinitrotoluene	1.0 max.
Dibutyl Phthalate	0.5 max.
Sodium sulfate	0.50 max.
Diphenylamine	0.75 – 1.50
Calcium carbonate	0.25 max.

SHAPE

Flattened rounds

COLOR

Graphite coated, dark gray, shiny

DIMENSIONS

Due to the small size of ball powders such as M38, the physical dimensions of the propellant are measured only by their ability to pass through specific size sieves.

100% will pass through a U.S. Sieve #20

M38 Propellant for M218 and M219 Propelling Charge:

M38 propellant show actual size

Close-up of M38 Propellant shown above.

M44

FORMULATION :

Nitrocellulose	52.00 +/- 2.00
Nitroglycerin	44.00 +/- 1.50
Ethyl Centralite	2.00 +/- 0.30
Diethyl phthalate	2.00 +/- 1.00
Carbon Black	0.20 +/- 0.10 added
Candelilla Wax	0.10 +/- 0.10 added

SHAPE

Single-perforated stick

COLOR

Black

DIMENSIONS

Usage	Length (in)	Diameter (in)	Perf Diameter (in)	Inner (in)	Web Outer (in)	Average (in)	# of Perfs	Shape
120MM	6.4	0.1122	0.03543	-	-	0.0385	1	cylinder

M44 Propellant for 120MM Mortar:

While photo does show this propellant actual size, it does not show entire stick length of 6.4 inches.

M45

FORMULATION :

Nitrocellulose	86.00 +/- 1.50
Nitrolycerin	10.00 +/- 2.00
Ethyl Centralite	3.00 +/- 0.40
Potassium sulfate	0.60 +/- 0.30
Graphite glaze	0.40 +/- 0.20

SHAPE

PAP-7993, multi-perforated cylinder for 105MM:

RPD

There are eight formulations in the RPD series.

FORMULATIONS:

RPD 36:

Nitrocellulose	remainder
Methyl centralite	6.0
Diphenylamine	0.90
Potassium nitrate	1.0
Dibutylphthalate	3.0
Graphite	0.40 max.

RPD 380:

Nitrocellulose	57.10
Nitroglycerin	25.80
DEGDN	16.30
Akardite II	0.70
Magnesium Oxide	0.05
Graphite	0.05
Graphite Glaze	0.2 added

RPD-448:

Nitrocellulose	90.0
Acetyltriethyl citrate	8.0
Akardite II	1.00
Potassium sulfate	1.0
Graphite	0.15 max. added

FORMULATIONS (CONT'D)

RPD-449:

Nitrocellulose	89.60
Acetyltriethyl citrate	8.0
Akardite II	1.40
Potassium sulfate	1.0
Graphite	0.04 added

RPD-451:

Nitrocellulose	85.0
Dinitrotoluene	10.0
Dibutylphthalate	5.0
Diphenylamine	1.00 added
Potassium sulfate	1.0 added
Graphite	0.40 added

RPD-788:

Nitrocellulose	98.0
Diphenylamine	1.0
Methyl centralite	1.0

RPD-910:

Nitrocellulose	96.0
Diphenylamine	1.0
Potassium sulfate/ Nitrate	1.0
Methyl centralite	2.0

RPD-1315:

Nitrocellulose	33.5
Diphenylamine	1.5
Potassium sulfate	65.0

SPCF

SPCF is also known as NACO and BS-NACO.

FORMULATION :

Nitrocellulose	93.75
Butyl Stearate	3.00
Potassium sulfate	1.25
Lead carbonate	1.00
Ethyl centralite	1.00

Note: The stability of this propellant is only assessed through accelerated aging. Studies have shown that stabilizer concentration in this propellant is not reflective of the stability of the propellant and cannot be used to determine the stability Category of this propellant type.

SHAPE

Multi-perforated cylinder

COLOR

Cream, yellow, green, dark green, black

DIMENSIONS

Usage	Length (in)	Diameter (in)	Perf Diameter (in)	Inner (in)	Web Outer (in)	Average (in)	# of Perfs	Shape
5"/38	0.4245	0.235	0.0191	-	-	0.0445	7	cylinder
5"/54	0.5788	0.2442	0.0317	-	-	0.0373	7	cylinder
8"/55	1.0547	0.4874	0.0498	-	-	0.0852	7	cylinder

SPCF PROPELLANT

SPCF Propellant for 5"/38:

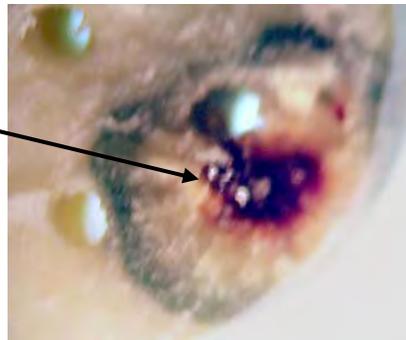

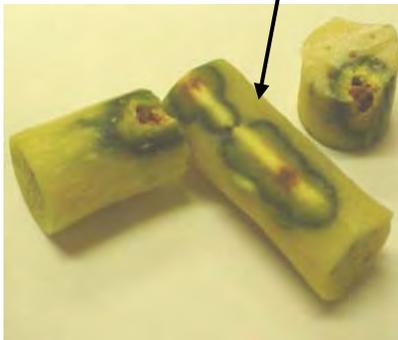

SPCF PROPELLANT

SPCF Propellant for 5"/54:

SPCF Propellant for 8"/55:

The above photos depict SPCF grains that are mottled or spotted green with brown cavity-like areas. The photo on the bottom left is a close-up of the mottled grains. The brown cavities have been determined to be uncolloided and unstabilized nitrocellulose. The photo on the bottom right, is a micro slide of the brown cavity in the grain. The brown cavities have been determined to be a result of localized self-heating of the uncolloided and unstabilized nitrocellulose.

Above photos show typical green color changes noted in SPCF propellant for the 5"/38. The photo on the left shows grains from one lot of SPCF. The photo on the right shows a close-up of some shriveled grains. Studies have determined that green and shriveled grains will have diminished stability as compared to the yellow grains. The presence of shriveled grains alone is not an indication of instability; accelerated aging must be performed in order to make that determination.

Photos above show typical green color change noted in the SPCF propellant for the 8"/55. Studies have determined that the green discolored grains will have diminished stability as compared to those grains which are not discolored. The presence of green colored grains alone is not an indication of instability; accelerated aging must be performed in order to make that determination.

This page intentionally left blank

SPCG

SPCG is also known as Cordite-N

FORMULATION :

There are two SPCF Formulations:

Composition #1

Nitrocellulose	18.00
Nitroglycerin	19.00
Nitroguanidine	55.00
Ethyl Centralite	7.00
Potassium Sulfate	1.00

Composition #2

Nitrocellulose	21.00
Nitroglycerin	9.00
Nitroguanidine	58.00
Dibutyl Phthalate	8.00
Ethyl Centralite	2.00
Potassium Sulfate	2.00

SHAPE

Multi-perforated cylinder

COLOR

Cream, cream color with gray flecks

SPD Propellant for 5"/54:

SPD Propellant for 6"/47:

SPD Propellant for 8"/55:

SPD PROPELLANT

SPD Propellant for 16"/45:

NOTE: The stability of SPD propellant for the 16"/45 (above) is only assessed for stability using accelerated aging. Chemical analysis is not applicable to this propellant and cannot be used to determine stability category.

SPDB PROPELLANT

SPDB propellant is SPD propellant that has been blended. The purpose of blending is to provide a uniform index of ample size and desired character from smaller lots. SPDB will have the same formulation and the same dimensions/appearance of the SPD.

SPDW PROPELLANT

SPDW propellant is SPD propellant that has been reworked by grinding followed by processing to produce stabilized propellant grains. SPDW will have the same formulation and the same dimensions/appearance of the SPD.

SPDF

This section include SPWF propellant

FORMULATION :

Nitrocellulose 97.00
Potassium sulfate 2.00
Diphenylamine 1.00

Close-up of WCR-845 Propellant for 25MM:

Appendix A:
*Navy Propellant Nomenclature and Lot
Numbering Information*

APPENDIX A: Navy Propellant Nomenclature and Lot Numbering

The Navy propellants included in this manual are limited only to those types that are commonly stored at Army installations.

Class Designation Letters for Navy Propellant: Unlike the Model numbers (M1, M6, M9 etc.) the Army assigns propellants, designation of Navy propellant types is accomplished through the use of the class designation letters:

SP: Smokeless Powder
B: Blended
C: Stabilized by ethyl centralite
D: Stabilized by diphenylamine
F: Flashless powder
G: Contains nitroglycerin and nitroguanidine
N: Nonhydroscopic
W: Reworked by grinding
X: Water-drying process

These letters are combined to designate the chemical make-up of the majority of Navy propellant types and provides for rapid identification of a propellant's basic chemical make-up. Below are the class designation letter combinations for the Navy propellants included in this manual:

SPCF: smokeless powder (SP) stabilized by ethyl centralite (C) that also contains a non-combustible flash inhibitor (F). This propellant is also referred to as NACO (Navy Cool) or BS-NACO.

SPCG: smokeless powder (SP) stabilized by ethyl centralite (C) that also contains nitroglycerin and nitroguanidine (G).

SPD: smokeless powder (SP), stabilized by diphenylamine (D).

SPDB: smokeless powder (SP), stabilized by diphenylamine (D) that has been blended (B).

SPDF: smokeless powder (SP), stabilized by diphenylamine (D) that also contains a non-combustible flash inhibitor (F)

SPDN: smokeless powder (SP), stabilized by diphenylamine (D) to which nonvolatile (N) materials have been added to reduce moisture absorption.

SPDW: smokeless powder (SP), stabilized by diphenylamine (D) which has been reworked (W) by grinding.

SPWF: is a smokeless powder (SP) that has been reworked (W) into a flashless (F) powder.

The Navy Propellant Lot Numbering System: The lot numbering of a Navy propellant differs dramatically from that of an Army lot number particularly since the characters do not represent the same information as that in Army lots numbers. A Navy propellant lot number will typically appear as:

PAPB 29 - 10201

The first two characters (PA) are the manufacturer's code. In this case, it is Picatinny Arsenal. See Table 1 for a list of all manufacturer's codes.

The second two characters (PB) are the granulation or caliber code. In this case, it would be for a 3"/50. See Table 2 for a list of all granulation/caliber codes.

The two numbers (29) identify the actual lot number.

The last five numbers, (10201) are the index number of the propellant.

The index number is the prime identifier for the propellant (not the lot number as with Army propellants). In Army Inventories you may see lot numbers for Navy propellant written as "SPCF-10201" as often the propellant type (SPCF) is combined with the Index number (10201) and used as a lot number. In addition, it may be written simply as "Index 10201".

TABLE 1: Navy Manufacturer's Code

Code	Manufacturer
AD	Alabama Ordnance Works
AJD	Aerojet / Fullerton
ATJ	Alliant Technologies
BAJ	Badger Army Ammunition Plant
BH	Bangor Ordnance Works
BO	Badger Army Ammunition Plant
CA	Canadian Arsenal, LTD
