ORDNANCE SYSTEMS

- Metal Working and Machining Shop Set (MWMSS)
- Armament Repair Shop Set (ARSS)
- Hydraulic System Test and Repair Unit (HSTRU)
- Fire Suppression Refill System (FSRS)
- Load Bank System (LBS)
- Machinist's Measuring Tool Set (MMTS)

Metal Working and Machining Shop Set (MWMSS)

ACAT III - P&D

PEO CS&CSS/PM FP/PdM SKOT

Program Description

The Metal Working and Machining Shop Set (MWMSS) is a concept that assembles and packages tool load configurations based on the 91E (Allied Trades) MOS. MWMSS replaces multiple LINs which are outdated, unsupported and are themselves part of the non-modernized equipment that "hinder current operations".

This system comes in two types, TYPE I and TYPE II. TYPE I will contain a Computer Numeric Controlled (CNC) Lathe, Mill Drill, Multi-Process Welding, Thermal Cutting equipment, Air-Arc Gouging, air compressor, Mobile Electric Power (MEP) generator for shop power, Environmental Control Unit (ECU), and assortments of hand/air tools.

TYPE II augments Type I and will contain a CNC Milling Machine, Plasma table, ECU, and an assortment of hand/air tools.

AAO: Type 1 – 227, Type 2 - 190

Quantity Fielded: Type 1 – 0, Type 2 - 0 APUC: Type 1 – \$374K, Type 2 - \$284K

Quantity on Contract: Type 1 - 25, Type 2 -23

Recent Milestones or Events Since Last PSR

- MSC Jun 2014
- Log Demo completed Aug 2014

Near term Milestones or Events in the Next 90 days

- Full Material Release (FMR) August 16
- First Unit Equipped (FUE) August 16

Armament Repair Shop Set (ARSS)

ACAT III - P&D

Unclassified: FOUO

PEO CS&CSS/PM FP/PdM SKOT

Program Description

The Armament Repair Shop Set (ARSS) will update the armament tools, sets and kits, take advantage of technology advancements, improve accountability and transportability and incorporate tool warranties. The current armament tool sets date back more than 25 years and are antiquated, bulky and difficult to maintain, inventory and transport. The Shelter will contain a Mobile Electric Power (MEP) generator for shop power, an assortment of hand as well as air tools and an Environmental Control Unit (ECU).

The ARSS will consolidate these five LINs:

1. T24523 Artillery Shop Set

2. T31784 Fire Control System Repair

3. W51499 Small Arms Shop Set

4. T16597 Small Arms Shop Set

AAO: 995 APUC: \$420K

Quantity Fielded: 16

Quantity on Contract: 58 (TYAD)

Hydraulic System Test and Repair Unit (HSTRU)

ACAT III - P&D

Unclassified: FOUO

PEO CS&CSS/PM FP/PdM SKOT

Program Description

The HSTRU is a robust hydraulic line and hose repair system capable of supporting 3 trained ordnance/engineers. HSTRU is HMMWV towable and air / helicopter transportable. It is built on the M1102 heavy Trailer.

Maintenance Capabilities Delivered

- Crimp style and field attachable hydraulic hose assembly fabrication
- Society of Automotive Engineers (SAE) and Joint Industrial Council (JIC) metal tube flaring and fabrication
- Metal tube bending
- Pneumatic brake line fabrication
- On-system hydraulic test circuit

Fire Suppression Refill System (FSRS)

ACAT III Unclassified: FOUO PEO CS&CSS/PM FP/PdM SKOT

Program Description

The FSRS is a self-contained, integrated unit equipped for safe performance of refilling fire suppression bottles and systems. It consists of a dismountable trailer-mounted enclosure (capable of stand-alone or trailer-mounted operation) containing the tools and equipment needed to fulfill the required refill tasks. FSRS consists of a transportable ISO container with an environmental control unit.

Load Bank System (LBS)

ACAT III

Unclassified: FOUO

PEO CS&CSS/PM FP/PdM SKOT

Program Description

- A Load Bank is a device which develops an electrical load and applies the load to an electrical power source and converts or dissipates the resultant power output of the source. The Load Bank is used to accurately mimic the operational or "real" load that a power source will see in actual application by providing a reliable, repeatable and fully controllable load.
- Load Bank System will fill capability gaps identified with the Army 91D Military Occupational Specialty (MOS) Power-Generation Equipment Repairer in meeting METL requirements.
- Load Banks were last issued in 1985, which makes the system 28 years old, exceeding its Economic Useful Life (EUL); manufacturing obsolescence and outdated technology exists.

Machinist's Measuring Tool Set (MMTS)

ACAT III

Unclassified: FOUO

PEO CS&CSS/PM FP/PdM SKOT

Program Description

The Machinist's Measuring Tool Set (MMTS) contains a tool load configured around the mission of the 91E (Allied Trades) Military Occupational Specialty (MOS).

The MMTS consists of 73 component parts, carried in one portable tool box. The set consists of gages, calipers, rulers, and other equipment to facilitate 91E's duties such as fabricating, repairing and modifying metallic and non-metallic parts.

The MMTS replaces:

The Tool Kit Welders and The Tool Kit Machinist
